

Chromosome Analysis Report: 077043

Date Reported: Thursday, June 13, 2019 Cell Line: PCD2-14-Cr2 Passage#: 30 Date of Sample: 6/4/2019 Specimen: Human IPS Results: 46,XX Cell Line Sex: Female Reason for Testing: Routine Characterization

Investigator: Aine Russell, Boston University

Cell: 31 Slide: G02 Slide Type: Karyotype Total Counted: 20 Total Analyzed: 8 Total Karyogrammed: 4 Band Resolution: 450 - 525

Interpretation:

This is a normal karyotype; no clonal abnormalities were detected at the stated band level of resolution.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".
